

QUIGLEY CREEK OPERATORS

System: Ranchview Estates

Date: 12/14/2024

Water usage:

The total domestic flow for the month of November was 409,104 gallons for an average daily flow rate of 13,636 gallons. This is a very similar flow from last month and is very consistent with previous years flows.

The total flow through the irrigation half of the system for November was 97,229 gallons for an average flow rate of 3,240 gallons. This is another sharp drop off in usage from the last month by more than 30,000 gallons per day but when compared to last year for November it is 90,000 gallons more which can be contributed to the warm weather.

Projects:

Due to the continued warm weather I will continue to locate the curb stops for as long as the weather permits.

Sampling:

All monthly sampling completed.
